ANNUAL INDEX
Journal of Chemical Education
Volume 62, 1985

The annual index for Volume 62 of the Journal of Chemical Education is divided into several parts. Book Reviews are indexed separately both by author and book title. Authors of articles are listed separately and are cross-referenced to other authors of the same article. The subject index includes titles listed by keywords, subject listings and listings of articles by feature column. The latter two are distinguished from the titles by printing the listing heading in italics. The following abbreviations are used throughout the index to indicated in which feature column an article appeared.

AA	*Applications and Analogies*	IC	*Inventory Control*	SAFETY	*Safety in the Chemical Laboratory*
CE	*Cooperative Education*	IMP	*Impact*	ST	*Safety Tips*
CHEM I	*Chem I Supplement*	IND	*Real World of Industrial Chemistry*	STAMP	*Chemistry on Stamps*
CHS	*Contemporary History Series*	INS	*Insights*	TD	*Tested Demonstrations*
CK	*Chemistry for Kids*	LTE	*Letter to the Editor*	TF	*Textbook Forum*
CP	*Chemical Principles Revisited*	OCE	*Opportunities in Continuing Education*	TICI	*Topics in Chemical Instrumentation*
CS	*Computer Series*	PO	*Provocative Opinion*	TS	*Thumbnail Sketches*
EQE	*Exam Question Exchange*	PROFILES	*Profiles in Chemistry*	VIEW	*View from my Classroom*
F&R	*Filtrates and Residues*			2YC	*2YC$_3$ Viewpoint*
GB	*Going Beyond, Going Further*				
GOALS	*Goals*				

Author Index

A

Abele, John C.—*see* **Keedy, Curtis, R.**

Abrams, Karl—*see* **Monroe, Manus.**

Adams, K. R., and **Meyers, M. B.** Activation energies for an enzyme-catalyzed and acid-catalyzed hydrolysis: An introductory interdisciplinary experiment for chemists and biochemists. 86

Adock, Louis, H. Preventing breakage of crucible lids. 609

Ahn, Myong-Ku, and **Kjonaas, Richard A.** A simple apparatus for laboratory dry ice production. 90

Akers, Michael J. Drug stabilization against oxidative degradation (CHEM I). 325

Alak, Ala—*see* **Armstrong, Daniel W.**

Alexander, John J., *editor.* Exam question exchange. 242, 402, 605, 863

Allen, Ralph O. Cracked pot chemistry: The role of analytical chemistry in archaeology (CHEM I). 37

Anastas, Paul T., Kano, Kunio, and **Anselme, Jean-Pierre.** 4,5-diphenyl-1-methylimidazole: An undergraduate laboratory experiment. 515

Anastas, Paul. T.—see **Warner, John C.**

Anderson, Carol P. Explaining chemical issues to the nonscientist. 768

Anderson, Robert J., and **Woodworth, Paul H.** An undergraduate program on computer interfacing (CS). 792

Andrews, Peter R.—*see* **Iskander, Magdy N.**

Ang, K. P.—*see* **Gunasingham, H.**

Anselme, Jean-Pierre—*see* **Anastas, Paul T.**

Anselme, Jean-Pierre—*see* **Warner, John C.**

Araujo, R. J. Photochromic glass (IND). 472

Arevalo, Agustin, and **Pastor, Gloria.** Verification of the Nernst equation and determination of a standard electrode potential. 882

Armour, M. A., Browne, L. M., and **Weir, G. L.** Tested disposal methods for chemical wastes from academic laboratories (SAFETY). A93

Armstrong, Daniel W., Marx, John N., Kyle, Don, and **Alak, Ala.** Synthesis and a simple molecular weight determination of polystyrene. 705

Armstrong, R. W.—*see* **Craney, C. L.**

Arnett, Edward M. Solvation energies of organic ions. 385

Ash, Craig, K.—*see* **Field, Kurt W.**

Atkinson, George F. Professional education in the sandbox: Hazard, perceived risk, acceptable risk (PO). 1070

Aymes, Daniel J. M., Poupon, Rene, and **Paris, Michel R.** An inexpensive laboratory pump (IC). 717

Ayorinde, Folahan O. Determination of stereochemical relationships. 297

B

Bailey, Christopher T., and **Lisensky, George C.** Synthesis of organometallic palladium complexes: An undergraduate experiment. 896

Baird, Donald M. A Laboratory exercise to introduce inorganic biomimetic compounds. 168

Baker, Marion. Report from the President of 2YC$_3$. 34

Ball, David W. Elemental etymology: What's in a name? 787

Bangs, Raymond D. The North American-New Zealand connection: A teacher exchange (OCE). 68

Bangs, Raymond D., *editor.* Opportunities in continuing education. 68

Banna, M. Salim. Relativistic effects at the freshman level. 197

Barone, R., Ribero, B., Gibert, B., and **Meyer, R.** Microcomputer-assisted drills in organic synthesis (CS). 411

Barrow, Lloyd H. Pre-chemistry acid rain activities for kids (CK). 339

Bartell, Lawrence S. Perspectives on the uncertainty principle and quantum reality (CP). 192

Barton, Janice S. Further observations on dye ligand affinity chromatography of serum albumin. 441

Baskett, W. P., and **Mathews, G. P.** An experiment to measure gas imperfection. 353

Bates, D. K., and **Ponter, A. B.** Industrial chemistry at Michigan Tech. 745

Batra, Suzanne W. T. Polyester-making bees and other innovative insect chemists (CHEM I). 121

Bauer, Christopher F. Sampling error lecture demonstration. 253

Baxter, Alexis V., Hangeland, Jon J., and **Harrison, Ernest A., Jr.** Concerning the syntheses and structure of 2,3-dihydro-1,4-diphenyl-2,3-triphenylenedicarboxylic anhydride. 79

Beavers, Ellington M., and **Nodine, Barbara F.** Evolution of the profession of research chemist in industry. 728

Bedenbaugh, Angela O.—*see* **Bedenbaugh, John H.**

Bedenbaugh, John H., and **Bedenbaugh, Angela O.** Production of scientific visual aids using only a photocopier. 1092

Behlow, Herbert W., Jr., and **Petersen, John D.** Low-cost elimination of plasma lines in Raman spectra. 163

Belloli, Robert C. Career options in chemistry. 333

Bell, William L. A friendly plastic. 240

Bent, Henry A. Let's keep chemistry out of kindergarten (PO). 1071

—My first day in a first course in chemistry. 603

—Should thermodynamics be x-rated (GOALS)? 228

—Should the mole concept by x-rated (INS)? 59

Berger, Selman A. Using a conversion matrix to simplify stoichiometric calculations from balanced equations (INS). 396

Bering, Charles L. Energy interconversions in photosynthesis (CHEM I). 659

Berry, Donna—*see* **Lash, Timothy D.**

Berry, Keith O. Focus on forensic experiments (F&R). 1060

—Literature of forensic science. 1044

Subject Index

A

Absorption spectra of a series of conjugated dyes: Determination of the spectroscopic resonance integral. **John J. Farrell.** 351
Academic departments with graduate and undergraduate programs, Safety in. **John A. Landgrebe.** A310
Academic success, Freshman chemistry as a predictor of future. **James S. Rixse and Miles Pickering.** 313
Accidents from which we can learn, Lecture demonstration. **George M. Bodner.** 1105
Acetic acid sodium acetate systems: A lecture experiment, Buffer capacity of various (TD). **Craig J. Donahue and Mary G. Panek.** 337
Acetylation of an unknown alcohol: An introductory ^{1}H-NMR experiment. **Stephen E. Branz.** 899
Acetylsalicylic acid in analgesic tablets, Titrimetric determination of. **Robert D. Braun.** 811
Acid-base behavior of oxides and hydroxides, Periodicity in the. **Ronald L. Rich.** 44
Acid-base indicators, Edible. **Robert C. Mebane and Thomas R. Rybolt.** 285
Acid-catalyzed hydrolysis: An introductory interdisciplinary experiment for chemists and biochemists, Activation energies for an enzyme-catalyzed and. **K. R. Adams and M. B. Myers.** 86
Acid rain activities for kids, Pre-chemistry (CK). **Lloyd H. Barrow.** 339
Acid rain analysis by standard addition titration. **Charles E. Ophardt.** 257
Acidic as yours, Why isn't my rain as? **O. T. Zajicek.** 158
Acronyms, Modern instrumental techniques: The battle of. **Thomas S. Cantrell.** 1101
Acrostic for chemistry teachers. 1126
Acrylic acid-methylmethacrylate copolymerization in dimethylsulfoxide, Monomer reactivity ratios. **Kieran I. Ekpanyong.** 173
ACS initiatives (8th Bien. Conf. Report). 12
Activation energies for an enzyme-catalyzed and acid-catalyzed hydrolysis: An introductory interdisciplinary experiment for chemists and biochemists. **K. R. Adams and M. B. Meyers.** 86
Addendum to "Some misunderstandings about Millikan's oil drop experiment" (LTE). **Harold Brower.** 455
Addition by bromine at low concentrations, NBS reaction: Simple explanation for the predominance of allylic substitution over olefin. **Carl C. Wamser and Lawrence T. Scott.** 650
Additives in common table salt, Chemical (TS). **David R. Tyler.** 1016
Adsorption processes in solution: An undergraduate physical chemistry experiment, Kinetic study of. **Julio Casado, Francisco Salvador, and Santiago Rincon.** 800
Agricultural chemicals for consumer use. **Edward Maslowsky, Jr.** 774
Air quality in instructional laboratories, Microscale organic laboratory: I: An approach to improving. **Samuel S. Butcher, Dana W. Mayo, Ronald M. Pike, Caroline M. Foote, Janet R. Hotham, and David S. Page.** 147
Air quality, Laboratory (SAFETY). **Samuel S. Butcher, Dana W. Mayo, Sandra M. Herbert, and Ronald M. Pike.**
Part I. A concentration model. A238
Part II. Measurements of ventilation rates. A261
Alarm, Simple water-still. **John T. Stock.** 814
Alcohol: An introductory ^{1}H-NMR experiment, Acetylation of an unknown. **Stephen E. Branz.** 899
Alcohols and ketones: An organic laboratory experiment, Nitric acid oxidation of selected. **Kurt W. Field, James P. Shields, Jean M. Standard, Craig K. Ash, Daniel J. Hoch, and Kenneth E. Kolb.** 637
Aldol condensation-photochemical-bromination sequence with emphasis on spectroscopic interpretations: An undergraduate organic experiment. **Alex T. Rowland, Martin W. Brechbiel, and Anne Sykes Gerelus.** 908
Algae to demonstrate natural products techniques, Use of brown. **Lee A. Porter.** 635
Alkali and alkaline-earth cations with macrocyclic ligands, Coordination chemistry of. **Bernard Dietrich.** 954
Alkyl and aryl halides in the presence of lithium metal and ultrasound: Promotion of organic reactions by ultrasound, Coupling of. **Timothy D. Lash and Donna Berry.** 85
Alkyl groups, Van der Waals compression of hydrogen atoms by geminal. **Mohammad Ismail Qureshi.** 861
Alkylation of ethyl acetoacetate and diethyl malonate, Phase-transfer-catalyzed. **Douglas L. Thompson and Perry C. Reeves.** 907
Analgesic tablets, Titrimetric determination of acetylsalicylic. **Robert D. Braun.** 811
Analytical chemistry program set (CS). **James K. Hardy.** 411
Analytical chemistry
Acid rain analysis by standard addition titration. 257
Archaeological chemistry (Chem I). 37
Breakthrough phenomena illustrated with natural gas. 614
Calculation of true values for solid unknowns, Back. 120
Chromatographic integrator for the TRS-80 (CS). 62
Colloid titration experiment. 627
Colorblindness and titrations with visual indicators. 255
Computing integrators (TICI). A212
Coulometric titrations using computer-interfaced potentiometric endpoint detection (CS). 688
Countercurrent extraction of ink. 1109
Demonstrating statistically based sampling error in a particulate mixture. 252
Demonstrations of signal-to-noise enhancement: Digital filtering. 691
Design of a computer-controlled flow-injection analyzer (CS). 65
Detection of chromium in presence of iron and manganese. 349
Determination of aspartame, caffeine, saccharin, and benzoic acid in beverages by high performance liquid chromatography. 618
Determination of lead in gasoline by atomic absorption spectrometry. 261
Determination of total cation content by ion exchange. 338
Different view of using titrimetric data. 443
Experiment to examine the phosphate interference in the flame emission analysis of calcium. 161
Experiment to introduce statistics. 536
Experiments in software data handling (CS). 866
Flame spectrometric determination of calcium in fruit juice by standard addition. 343
FORTH-language, computer-controlled potentiometric titration (CS). 667
Gas chromatographic determination of fatty acid compositions. 449
Gel filtration experiment (F&R). 715
HPLC determination of caffeine in beverages. 446
HPLC study of colas. 447
Improved calcium flame test. 622
Inexpensive Apple II/photometer interfacing. 692
Information management systems in the undergraduate instrumental analysis laboratory (TICI). A149, A173
Infrared spectroscopy of deuterated compounds. 633
Instrumentation and analytical methodology in forensic science. 1058
Instrumentation and the total analytical process (TICI). A85
Interfacing an IBM PC to a differential scanning calorimeter (CS). 64
Kinetic analysis of metal ions. 258
Microscale group test for carbonyl compounds. 806
Normal-phase open column versus reversed-phase high performance liquid chromatography. 1110
Polymerization evaluation by spectrophotometric measurements. 450
Primer on Fourier transform NMR. 213
Problem in calibrating a spectrophotometer. 885
Quantitative infrared spectroscopy experiment. 886
Quick method for determining the density of single crystals. 167
Sampling error lecture demonstration. 253
Selection of wavelengths for optimum precision in simultaneous spectrophotometric determinations. 541
Separation of lithium from magnesium, sodium, and potassium. 808
Signal-to-noise improvement. 542
Structural isomer identification via NMR. 260
Teaching trends (8th Bien. Conf. Report). 18
Titrimetric determination of acetylsalicylic analgesic tablets. 811
Undergraduate program on computer interfacing (CS). 792
Voltammetry as a model for teaching chemical instrumentation. 610
Wide selection of selective electrodes (LTE). 178
Apparatus
Atomizer for a dime. 244
Computing integrators (TICI). A212
Construction of corrosion-resistant, inexpensive lab lattices. 819
Convenient DC power source for laboratory applications. 620
Coulometric titrations using computer-interfaced potentiometric endpoint detection (CS). 688
Demonstrating statistically based sampling error in a particulate mixture. 252
Development of low-cost, locally produced laboratory equipment. 428
Device to eliminate plasma lines in Raman spectra. 163
Dry ice producer. 90
Economical, round-bottom-flask stand. 433
Efficient and inexpensive temperature-controlled chromatography column. 430
Flexible, pressure-equalizing sidearm. 548
FORTH-language, computer-controlled potentiometric titration (CS). 667
How to avoid explosions when heating small sealed tubes. 1014
Inexpensive Apple II/photometer interfacing. 692
Inexpensive developing chamber for radial chromatography. 820
Inexpensive, easily constructed vapor pressure. 345
Inexpensive laboratory pump (IC). 717
Inexpensive mercury vapor lamp. 526

Inexpensive shield for vacuum distillations. 570
Inexpensive solid-state photometer circuit useful in studying bioluminescence. 360
Information management systems in the undergraduate instrumental analysis laboratory (TICI). A149, A173
Interfacing a scanning infrared spectrophotometer to a microcomputer. 690
Knives, forks, and beer cans as potentiometric sensors (GB). 431
Low-pressure extraction. 533
No-cost three-dimensional pointer for stereoscopic projection. 701
Note concerning safety of bomb calorimetry. 902
Preventing breakage of crucible lids. 609
Problem in calibrating a spectrophotometer. 885
Quick conductivity cell. 799
RC filter for automatic differential potentiometry. 88
Silicone rubber as a sleeve mounting for a high-speed shaft bearing. 617
Simple device for obtaining visible spectra (IC). 155
Simple, inexpensive gas discharge/cathode ray tube. 340
Simple limewater maker. 437
Simple low-cost device for temperature control in nonisothermic chemical kinetics in solution. 613
Simple water-still alarm. 814
Simplified Dumas flask. 268
Two-liter pipet for bomb calorimetry. 634
Undergraduate program on computer interfacing (CS). 792
Updating older fume hoods. A178
Versatile system for vacuum-line manipulations. 356
Wide selection of selective electrodes (LTE). 178
Applications and analogies, edited by **Ron DeLorenzo**
An analogy of the NMR effect. 319
Aqueous hydrogen peroxide: Its household uses and concentration units. **Michael J. Webb.** 152
Auto analogies. **Richard A. Potts.** 579
Competition analogy. **Wayne L. Felty.** 869
Doing the dishes: An analogy for use in teaching reaction kinetics. **Arthur M. Last.** 1015
Electrochemical errors. **Ron DeLorenzo.** 424
Gram formula weights and fruit salad. **Wayne L. Felty.** 61
Limiting and excess reagents, theoretical yield. **Ernest F. Silversmith.** 61
Apricots—A nuclear chemistry experiment, Potassium in. **Jack C. Norman.** 439
Aquatic weeds, Challenge of herbicides for (IND). **Dean F. Martin** and **Barbara B. Martin.** 1006
Archaeology, Cracked pot chemistry: The role of analytical chemistry in (Chem I). **Ralph O. Allen.** 37
Arithmetic on a pocket computer, Chemical (CS). **Patrick L. Pollet.** 413
Art hazards—Educating the artist. **Allen A. Denio.** 772
Artists' pigments, Chemistry and. **Ian S. Butler** and **Richard J. Furbacher.** 334
Aspartame, caffeine, saccharin, and benzoic acid in beverages by high performance liquid chromatography: An undergraduate analytical chemistry experiment, Determination of. **Michael F. DeLaney, Kathleen M. Pasko, David M. Mauro, Diane S. Gsell, Philip C. Korologos, John Morawski, Linda J. Krolikowski,** and **F. Vincent Warren, Jr.** 618
Atomic absorption spectrometry, Determination of lead in gasoline by. **M. F. M.Coleman.** 261
Atomic form periodic table, Revised. **Frederick C. Strong III.** 456
Atomic structures and bonding, Everyone wants to be a model teacher: Part III: Extensions to (OCE). **C. L. Schrader.** 71
Atomic weights to four significant figures, IUPAC table of. 744
Atomizer for a dime. **J. L. Vergara, M. E. Kreman, G. A. Zamighi,** and **S. A. Simon.** 244
Autobiographers: the 19th century, Chemists as. **Margaret Millar, Ian T. Millar,** and **E. G. Walaschewski.** 275
Avogadro's number problems, Five (TS). **David Todd.** 76

B

Baccalaureate origins of doctorate recipients in chemistry: 1920-80. **Alfred E. Hall.** 406
Balancing be taught, How should equation? **Spencer K. Porter.** 507
Balancing, More on chemical reaction. **D. F. Swinehart.** 55
Ballons, Double (LTE). **Eugene McLaren.** 720
Bathochromic shift of monosubstituted benzenes, Frontier orbital analysis of the. **Anthony J. Duben.** 373
Beer cans as potentiometric sensors, Knives, forks and (GB). **Walter S. Selig.** 431
Beginning with a bang. **A. Truman Schwartz.** 601
Beguin, John, and his "Chymical Beginner": The first popular textbook of chemistry? **John S. Davidson.** 751
Benzene synthesis, Graphics drill and game programs for (CS). **Patrick J. Flash.** 1028
Benzenes, Frontier orbital analysis of the bathochromic shift of monosubstituted. **Anthony J. Duben.** 373
Benzoic acid in beverages by high performance liquid chromatography: An undergraduate analytical chemistry experiment, Determination of aspartame, caffeine, saccharin, and. **Michael F. Delaney, Kathleen M. Pasko, David M. Mauro, Diane S. Gsell, Philip C. Korologos, John Morawski, Linda J. Krolikowski,** and **F. Vincent Warren, Jr.** 618
Bibliography, Industrial chemistry (IND). **Solomon Marmor.** 331
Biennial Conference on Chemical Education, Report of Eighth. **Mary Virginia Orna, O.S.U.** 3
Binary solution, Theory of the liquid-vapor transition of a perfect. **M. P. Silverman.** 112
Biochemical molecules, Experiment to quantitate organically bound phosphate: With special emphasis on. **Richard E. Palmer.** 898
Biochemistry off the shelf. **Jerry L. Wilson.** 796
Biochemistry
Activation energies for an enzyme-catalyzed and acid-catalyzed hydrolysis. 86
Bioinorganic activity of technetium radiopharmaceuticals. 965
Bioinorganic chemical modeling of dioxygen-activating copper proteins. 983
Bioinorganic chemistry—State of the art. 916
Catalytic function of enzymes (CHEM I). 1008
Challenge of herbicides for aquatic weeds (IND). 1006
Colloid titration experiment. 627
Consumer applications of chemical principles: Drugs (TS). 328
Coordination chemistry of alkali and alkaline-earth cations with macrocyclic ligands. 954
Copper-zinc superoxide dismutase. 990
Demonstration of erythrocyte membrane asymmetry. 621
Energy interconversions in photosynthesis (CHEM I). 659
Experimental approaches to studying biological electron transfer. 932
Further observations on dye ligand affinity chromatography of serum albumin. 441
Improvements in the separation of beta-carotene and lycopene by column chromatography. 540
Inexpensive and quick method for demonstrating column chromatography of plant pigments of spinach extract (TD). 530
Insect chemistry (CHEM I). 121
Key elements of the chemistry of cytochrome P-450. 928
Laboratory exercise on inorganic biomimetic compounds. 168
Methemoglobinemia: An illness caused by the ferric state. 181
Molybdenum enzymes, cofactors, and model systems. 943
More refined experiments with hemoglobin. 1122
New perspectives on the essential trace elements. 917
Preparation and characterization of myosin proteins. 900
Progress in understanding a novel copper center in proteins. 997
Protein structure model. 1077
Rapid equilibrium-ordered enzyme mechanisms. 656
Semipermeability of biological membranes. 89
Spectroscopic studies of the catechol dioxygenases. 938
Synthetic analogs of O_2-binding heme proteins. 974
Use of brown algae to demonstrate natural products techniques. 635
Use of the "cubic snake" as a molecular model. 1074
Zinc enzymes. 924
Bioinorganic chemistry—State of the art
Introduction. **David R. McMillin.** 916
New perspectives on the essential trace elements. **Earl Frieden.** 917
Zinc Enzymes. **I. Bertini, C. Luchinat,** and **R. Monnanni.** 924
Key elements of the chemistry of cytochrome P-450. **John T. Groves.** 928
Experimental approaches to studying biological electron transfer. **Robert A. Scott, A. Grant Mauk,** and **Harry B. Gray.** 932
Spectroscopic studies of the catechol dioxygenases. **Lawrence Que, Jr.** 938
Molybdenum enzymes, cofactors, and model systems: The chemical uniqueness of molybdenum. **S. H. N. Burgmayer** and **E. I. Stiefel.** 943
Coordination chemistry of alkali and alkaline-earth cations with macrocyclic ligands. **Bernard Dietrich.** 954
Bioinorganic activity of technetium radiopharmaceuticals. **Thomas C. Pinkerton, Carla P. Desilets, Daniel J. Hoch, Martin V. Mikelsons,** and **George M. Wilson.** 965
Synthetic analogs of O_2-binding heme proteins. **Kenneth S. Suslick** amd **Thomas J. Reinert.** 974
Bioinorganic chemical modeling of dioxygen-activating copper proteins. **Kenneth D. Karlin** and **Yilma Gultneh.** 983
Copper-zinc superoxide dismustase: A unique biological "ligand" for bioinorganic studies. **Joan Selverstone Valentine** and **Duarte Mota De Freitas.** 990
Taming of the blue: Progress in understanding a novel copper center in proteins. **David R. McMillin.** 997
Bioluminescence, Inexpensive solid-state photometer circuit useful in studying. **A. V. Stiffey, D. L. Blank,** and **G. I. Loeb.** 360
Biomimetic compounds, Laboratory exercise to introduce inorganic. **Donald M. Baird.** 168
Bioorganic chemistry, My journey from organic to (CHS). **Theodor Wagner-Jauregg.** 592
Bjerrum, Jannik, and Christian Klixbull Jorgensen, Interview with. **George B. Kauffman.** 1002
Bleach, Design of Laboratory experiments in the 1980's: A case study on the oxidation of alcohols with household. **Jerry R. Mohrig, David M. Nienhuis, Catherine F. Linck, Carol Van Zoeren, Brian G. Fox,** and **Peter G. Mahaffy.** 519
Bomb calorimetry, Note concerning safety in. **Leland Y. Wilson** and **Roger Tatum.** 902
Bomb calorimetry: The energy content of pizza. **Roland P. Stout, Faith E. Nettleton,** and **Lynn M. Price.** 438

Bomb calorimetry, Two-liter pipet for. **Roland P. Stout.** 634
Bond order, Fractional (EQE). **Wai-Kee Li.** 605
Bonding, An ionic model for metallic. **Frank Rioux.** 383
Bonding concepts, Origins of (LTE). **Linus Pauling.** 362
Bonding concepts, Origins of (LTE). **R. T. Sanderson.** 362
Boscovich, Roger, and the development of chemical theory. **R. Rooney.** 848
Box-and-whisker plots. **Russell D. Larsen.** 302
Breakage of crucible lids, Preventing. **Louis H. Adock.** 609
Breakthrough phenomena, Use of laboratory-supplied natural gas in. **G. A. Eiceman, B. Davani, and J. Gardea-Torresdey.** 614
Brittleness of ionic and metallic crystals, Model to illustrate the. **James P. Birk.** 667
Bromohydrin of 3-sulfolene, Preparation of the. **Fred H. Greenberg.** 638
BS chemist in industry. **Philip H. Merrell.** 734
Buffer action and the acidifying effect of CO_2, Visualization of (TD). **Neils D. Schonbeck.** 436
Buffer action, Simple demonstration of. **Marilyn D. Duerst.** 435
Buffer capacity of various acetic acid-sodium acetate systems: A lecture experiment (TD). **Craig J. Donahue and Mary G. Panek.** 337
Buffer demonstration (TD). **Charles E. Ophardt.** 606
Buffer or not to buffer, that is the question, To (EQE). **A. Mancott.** 606
Buffer solutions: A laboratory experiment, The determination of the pH of standard. **K. R. Harris.** 350
Buildings, Developing educational specifications for academic chemistry buildings. **Frank L. Chlad.** 852
Butane lighter fluid can, Measuring the atomic or molecular mass of a gas with a tire gauge and a (F&R). **George M. Bodner and Lenard J. Magginnis.** 434

C

Caffeine in beverages by high performance liquid chromatography, Determination of. **James E. DiNunzio.** 446
Calcium, An experiment to examine the phosphate interference in the flame emission analysis of calcium. **Donald C. Jackman.** 161
Calcium flame test, Improved. **Robert S. Pearson.** 622
Calcium in fruit juice by standard addition, Flame spectrometric determination of. **Arthur N. Strohl.** 343
Calculation of the reversibility factor for an irreversible adiabatic process of an ideal gas. **On-Kok Chang.** 108
Calculation of true values for solid unknowns, Back. **E. B. Buchanan, Jr.** 120
Calculations by the rolling ball model, Trajectory. **G. M. Fernandez, J. A. Sordo, and T. L. Sordo.** 491
Calibrating a spectrophotometer, Problem in. **James G. Johnson.** 885
Calorimeter, IBM PC interfaced to a Perkin-Elmer DSC-1 differential scanning (CS). **B. Millier, M. Van Oort, and M. A. White.** 64
Calorimetry, Note concerning safety in bomb. **Leland Y. Wilson and Roger Tatum.** 902
Calorimetry, Two-liter pipet for bomb. **Roland P. Stout.** 634
CAPE: A computer program to assist with practical assessment (CS). **Peter M. May, Kevin Murray, and David R. Williams.** 310
Carbanion formation, Phase transfer catalysis and (TD). **John W. Hill and Lori J. Enloe.** 606
Carbonic anhydrase catalysis: An experiment on enzyme kinetics. **Greg T. Spyridis, J. E. Meany, and Y. Pocker.** 1124
Carbonyl and -nitrosyl complexes: A laboratory experiment, Iron-sulfur-. **Christopher Glidewell, Andrew R. Hyde, James S. McKechnie, and Peter J. Pogorzelec.** 534
Carbonyl compounds, Microscale group test for. **V. Horak and R. F. X. Klein.** 806
Career options in chemistry. **Robert C. Belloli.** 333
Carnot cycle, Comments on the closure of the. **Levi Tansjo.** 585
Catalysis: An experiment on enzyme kinetics, Carbonic anhydrase. **Greg T. Spyridis, J. E. Meany, and Y. Pocker.** 1124
Catalysis and carbanion formation, Phase transfer (TD). **John W. Hill and Lori J. Enloe.** 608
Catalysis experiment, Production of oxygen gas: A student. **A. I. Onuchukwu and P. B. Mshelia.** 809
Catalysis, Preparation of benzoyl esters of phenols and benzoic anhydride by phase-transfer. **A. Yeadon, T. A. Turney, and G. Ramsay.** 518
Catalytic function of enzymes (CHEM I). **Allan G. Splittgerber.** 1008
Catechol dioxygenases, Spectroscopic studies of the. **Lawrence Que, Jr.** 938
Cathode ray tube, Simple, inexpensive gas discharge. **Roger L. Weichman.** 340
Cathodic protection by impressed current (TD). **R. Celdrán and P. Gonzalo.** 531
Cation content by ion exchange: Unknowns for use in quantitative analysis, Determination of total. **Kathryn R. Williams.** 338
Cationic micelles on the hydrolysis of 4-nitrophenyl acetate, Effect of. **Elvira Rodenas and Soledad Vera.** 1120
Chain reaction wheel: An approach to free radical reactions. **Manus Monroe and Karl Abrams.** 467
Chelating agents in everyday consumer products: Some food, cleaning, and photographic applications, EDTA-type (TS). **J. Roger Hart.** 75
Chem I supplement, edited by **Michael R. Slabaugh and Helen J. James**
Catalytic function of enzymes. **Allan G. Splittgerber.** 1008
Cracked pot chemistry: The role of analytical chemistry in archaeology. **Ralph O. Allen.** 37
Drug stabilization against oxidative degradation. **Michael J. Akers.** 325
Energy interconversions in photosynthesis. **Charles L. Bering.** 659
Nuclear synthesis and identification of new elements. **Glenn T. Seaborg.** 392
Polyester-making bees and other innovative insect chemists. **Suzanne W. T. Batra.** 121
The transuranium elements. **Glenn T. Seaborg.** 463
Chemical engineering curriculum, Polymer principles for the. **Polymer Core Course Committee.** 1079
Chemical principles revisited, edited by **Dan Kallus and Russell D. Larsen**
Perspectives on the uncertainty principle and quantum reality. **Lawrence S. Bartell.** 192
Radioactive dating: A method for geochronology. **M. W. Rowe.** 580
ChemiCo News: A Colorado chemistry newsletter. **James O. Schreck.** 704
Chemistry course for high ability 8th, 9th, and 10th graders. **Richard Kilker, Jr.** 423
Chemistry for citizens: A symposium. 762
New ideas for improving public understanding of science and technology. **William Mooney.** 762
How much chemistry should be in a nonmajors' chemisry course. **Richard Steiner.** 762
Science for citizens: A plan with a purpose. **John D. Hostettler.** 764
Chemistry for citizens: Content and strategies. **John W. Hill.** 765
Everyday chemistry: A general education science course for skill vocations. **James R. Hicks.** 767
Explaining chemical issues to the nonscientist. **Carol P. Anderson.** 768
How to turn on an electric light. **F. H. Westheimer.** 769
Art Hazards—Educating the artist. **Allen A. Denio.** 772
Agricultural chemicals for consumer use. **Edward Maslowsky, Jr.** 774
Application of chemical principles and methods to the investigation of a crime. **Keith Berry.** 776
Forensic science: A way to introduce scientific techniques to nonscience majors. **W. Glenn Esslinger.** 777
Use of field trips in a nonscience majors course. **C. H. Breedlove, Jr.** 778
Chemistry for kids, edited by **Patricia J. Smith**
Chemistry for gifted children in the intermediate grades. **Dorothy Gabel.** 702
"Chemistry set" chemistry for elementary school teachers. **James C. Fanning and Sybil S. Fanning.** 527
Laboratory chemistry for elementary school teachers. **Linda M. Woodward.** 527
Pre-chemistry acid rain activities for kids. **Lloyd H. Barrow.** 339
What do chemists do: A program for grades 1-3 (CK). **Jean B. Umland.** 125
Chemistry on stamps—A miniseries. 1041
Chemistry—To all it concerns (LTR). **Faik A. K. Nasser.** 178
Chlorophyll a and chlorophyll b from their diastereomers, Normal-phase open column versus reversed-phase high performance liquid chromatography: Separation of. **Peter M. Schaber.** 1110
Cholesteric liquid crystals, Preparation and properties of. **Graeme Patch and Gregory A. Hope.** 454
Chromatographic integrator for the TRS-80 (CS). **James K. Hardy.** 62
Chromatography
Computer interactive display of chromatography of inks (CS). 410
Countercurrent extraction of ink. 1109
Determination of aspartame, caffeine, saccharin, and benzoic acid in beverages by HPLC. 618
Efficient and inexpensive temperature-controlled chromatography column. 430
Further observations on dye ligand affinity chromatography of serum albumin. 441
Gas chromatographic determination of fatty acid compositions. 449
HPLC determination of caffeine in beverages. 446
HPLC study of colas. 447
Improved method for visualizing TLC plates using iodine. 156
Improvements in the separation of beta-carotene and lycopene by column. 540
Inexpensive and quick method for demonstrating column chromatography of plant pigments of spinach extract (TD). 530
Inexpensive developing chamber for radial chromatography. 820
Ion exchange chromatography experiment. 170
Microscale group test for carbonyl compounds. 806
Normal-phase open column versus reversed-phase HPLC. 1110
Reverse-phase separation of FD & C dyes using a solvent gradient. 798
Separation and identification of commonly used drugs by TLC. 160
TLC of organic dyes in undergraduate labs. 361
Undergraduate organic experiment using thin-layer chromatography. 183
Chromatography of inks, Science fair display of (CS). **G. L. Breneman and O. J. Parker.** 410
Chromium in presence of iron and manganese, Detection of. **Wolfgang Werner.** 349
Chromium(II) acetate, A simple homogeneous precipitation preparation of. **John C. Reeve.** 444
Citizens: A plan with a purpose, Science for. **John D. Hostettler.** 764
Citizens: A symposium, Chemistry for. 762 (see listing of articles under *Chemistry for Citizens*)

Citizens: Content and strategies, Chemistry for. **John W. Hill.** 765
Clarke, F. W., and nineteenth century undergraduate research at the University of Cincinnati. **Mel Gorman.** 233
Classical observables and superselection rules, Simple derivation of chemically important. **U. Muller-Herold.** 379
Clinical chemistry curriculum, Laboratory information science in the (CS). **Donald A. Boudreau** and **Paul G. Catrou.** 496
Clincial chemistry, Experiment for introducing statistics to students of analytical and. **Richard A. Paselk.** 536
Close packing: A spontaneous hard-sphere model, Periodic and aperiodic. **B. W. van de Waal.** 293
Cloud or rain drop: A computer-based solution for a six-component system, Equilibrium pH of a (CS). **Richard J. Vong** and **Robert J. Charlson.** 141
Cofactors, and model systems: The chemical uniqueness of molybdenum, Molybdenum enzymes. **S. J. N. Burgmayer** and **E. I. Stiefel.** 943
Colas: An HPLC experiment, Study of. **Arthur N. Strohl.** 447
College chemistry students' recommendations to high school students. **H. Eric Streitberger.** 700
Colloid titration—A rapid method for the determination of charged colloid. **Keihei Ueno** and **Ken'yu Kina.** 627

Crystal systems. 219
Seventeen two-dimensional space-group symmetries in Hungarian needlework. 35
Crystals, Classroom experiment on phase equilibria involving orientational disordering in. C. C. Mjojo. 83
Crystals, General approach to radius ratios of simple ionic. Hasan Gul. 384
Crystals, Model to illustrate the brittleness of ionic and metallic. James P. Birk. 667
Crystals, Molarity (atomic density) of the elements as pure crystals. Linus Pauling and Zelek S. Herman. 1086
Crystals, Quick method for determining the density of single crystals. Pascual Roman and Juan M. Gutierrez-Zorrilla. 167
"Cubic snake" as a molecular model, Use of the. Chaim Gilon. 1074
Cuboctahedron model, Easily constructed. Shukichi Yamana. 1088
Cupellation: The oldest quantitative chemical process. Jerome O. Nriagu. 668
Cuprammonium rayon process, Demonstration of the (TD). George B. Kauffman and Mohammad Karbassi. 878
Curriculum
Chemistry course for high ability 8th, 9th, and 10th graders. 423
Chemistry for gifted children in the intermediate grades (CK). 702
Chemistry for the public. 1100
Chemistry of polymers, proteins, and nucleic acids. 1075
"Chemistry set" course for elementary school teachers (CK). 527
Chemistry teacher enrichment programs. 698
Cooperative education program in forensic chemistry. 1057
Course on career options in chemistry. 333
Course on macromolecules. 286
Course on synthetic fuels. 249
Electronic instrumentation at the liberal arts college. 144
Environmental chemistry program at Vassar College. 137
Freshman chemistry and materials at NJIT. 133
Geochemistry for chemists. 823
Heretical perspectives in "writing across the curriculum" (PO). 400
High school course in organic chemistry (VIEW). 321
Industrial chemistry at Michigan Tech. 745
Industrial chemistry course to bridge the academia-industry gap. 736
International cooperative work experience (CE). 131
Introducing chemistry undergraduate students to online chemical information retrieval. 315
In-service training programs in the forensic sciences. 1046
Laboratory-based forensic techniques course as an alternative to a natural science requirement. 1047
Laboratory chemistry for elementary school teachers. 527
Laboratory information science in the clinical chemistry curriculum (CS). 496
Modern inorganic chemistry as found in the contents of seven post-1980 textbooks. 747
New approach to training secondary school teachers. 426
Polymer principles in the undergraduate physical chemistry course. 780, 1030
Program for grades 1–3 (CK). 125
Program to encourage women to pursue science as a career. 837
Safety in academic departments with graduate and undergraduate programs. A310
Series of industrial chemistry courses. 742
Symposium on chemistry for citizens. 762
Teaching industrial chemistry through case studies. 198
Two-cycle organic chemistry. 77
Undergraduate education in forensic science and chemistry. 1053
Cyclohexane by vibrational spectroscopy: A spectroscopy experiment, Identification of the stable conformer of. M. V. Garcia and M. I. Redondo. 887
Cyclopropane: A gas phase kinetic experiment for the undergraduate laboratory, Pyrolysis of. B. V. O'Grady. 709
Cytochrome P-450: The oxygen rebound mechanism, Key elements of the chemistry of. John T. Groves. 928

D

Data handling, Experiments in software (CS). Robert Q. Thompson. 866
Database—An "experiment" for the organic and forensic laboratories, Using a computer. Jean B. Umland. 500
Davy, Humphrey: At the vanguard of a new chemistry (PROFILES). Vinay Kumar and Linda Milewski. 397
DC power source for laboratory applications, Convenient. Emily J. Rose and Larry I. Shoer. 620
DCl, Better way to prepare. J. Leland Hollenberg. 897
"Delta plots"—A new way to visualize electronic excitation. Harry Morrison, William L. Jorgensen, Bernard Bigot, Daniel Severance, Yldefonso Munoz-Sola, Randy Strommen, and Bipin Pandey. 298
Demonstration accidents from which we can learn, Lecture. George M. Bodner. 1105
Demonstration of buffer action, Simple. Marilyn D. Duerst. 435
Demonstration of erythrocyte membrane asymmetry. Philip Pederson, Marc Majewski, and Peter Lipke. 621
Demonstrations with polymers (8th Bien. Conf. Report). 4
Density of single crystals, Quick method for determining the. Pascual Roman and Juan M. Gutierrez-Zorrilla. 167
Derivation of the ideal gas law (TF). S. Levine. 399
Descriptive chemistry, Puzzles for teaching. Mildred H. Evans. 1103
Design of laboratory experiments in the 1980's: A case study on the oxidation of alcohols with household bleach. Jerry R. Mohrig, David M. Nienhuis, Catherine F. Linck, Carol Van Zoeren, Brian G. Fox, and Peter G. Mahaffy. 519
Determination of aspartame, caffeine, saccharin, and benzoic acid in beverages by high performance liquid chromatography: An undergraduate analytical chemistry experiment. Michael F. Delaney, Kathleen M. Pasko, David M. Mauro, Diane S. Gseli, Philip C. Korologos, John Morawski, Linda J. Krolikowski, and F. Vincent Warren, Jr. 618
Determination of ethane-1, 2-diamine in inert complexes: A student analysis for obtaining compositions of complexes. Graeme H. Searle. 892
Deuterated compounds: An undergraduate experiment, Infrared spectroscopy of. Patrick MacCarthy. 633
Deuterium exchange kinetics by NMR: An undergraduate physical chemistry experiment. G. C. Roper. 889
Developing and maintaining a co-op employer network (CE). Frank Mitchell. 403
Developing chamber for radial chromatography, Inexpensive. Robert C. Gadwood. 820
Digital filtering, Demonstrations of signal-to-noise enhancement. L. Glasser. 691
Dilution analysis and secular equilibrium study: Two complementary radiochemistry experiments, Isotopic. Kathryn R. Williams and Levin C. Lipford. 894
Dimensional analysis, Working backwards is a forward step in the solution of problems by. Robert F. Drake. 414
Diphenyl-1-methylimidazole: An undergraduate laboratory experiment, 4, 5-. Paul T. Anastas, Kunio Kano, and Jean-Pierre Anselme. 515
Display of chromatography of inks, Science fair (CS). G. L. Breneman and O. J. Parker. 410
Disposal methods for chemical wastes from academic laboratories, Tested (SAFETY). M. A. Armour, L. M. Browne, and G. L. Weir. A93
Dissecting microscope in teaching introductory chemistry, Using a. Robert Winokur and Manus Monroe. 157
Distillations, Inexpensive shield for vacuum. W. David Loehle. 570
Division of Chemical Education
Election of officers. 647
Report of the ACS examinations committee. 271
Dominoes: How not to get lost in the shuffle, Chemical. James M. Garrett. 1102
Drills in organic synthesis, Microcomputer-assisted (CS). R. Barone, B. Ribero, B. Gibert, and R. Meyer. 411
Drug stabilization against oxidative degradation (CHEM I). Michael J. Akers. 325
Drugs: A thin-layer chromatography experiment for freshman chemistry, Separation and identification of commonly used. Judith M. Bonicamp. 160
Drugs, Consumer applications of chemical principles (TS). John W. Hill and Susan M. Jones. 328
Dry ice production, A simple apparatus for laboratory. Myong-Ku Ahn and Richard A. Kjonaas. 90
Drying silica gel in a microwave oven. J. S. S. Gray. 1125
Dumas flask, Simplified. Fred J. Hadley. 268
Dye ligand affinity chromatography of serum albumin, Further observations on. Janice S. Barton. 441
Dyes: A study using fluorescence quenching and Forster theory, Energy transfer between. David M. Goodall and David R. Roberts. 711
Dyes: Determination of the spectroscopic

resonance integral, Absorption spectra of a series of conjugated. John J. Farrell. 351
Dyes in undergraduate labs, TLC of organic. Allen J. Scism. 361
Dyes using a solvent gradient, Reverse-phase separation of FD & C (TD). Martin G. Ondrus. 798

E

Easy DCl(g) prep for the HCl(g)-DCl(g) IR experiment. Garry R. Buettner. 524
Edible acid-base indicators. Robert C. Mebane and Thomas R. Rybolt. 285

Flameless organic teaching laboratories are safer (SAFETY). **Frederick J. Mathews.** A43
Flammable volatile liquid, Caution (ST)! **Miriam C. Nagel.** 251
Flow-injection analyzer: An undergraduate experiment, Design of a computer-controlled (CS). **Sam A. McClintock, James R. Weber, and William C. Purdy.** 65
Fluorescence for studying phase changes in solid state decomposition: 9-cyanoanthracene photodimer, Molecular. **El-Zeiny M. Ebeid.** 164
Fluorescence quenching and Forster theory, Energy transfer between dyes: A study using. **David M. Goodall and David R. Roberts.** 711
Fluorescence quenching of acridinium ions in sodium dodecyl sulfate micelles. **El-Zeiny M. Ebeid.** 165
Food, cleaning, and photographic applications, EDTA-type chelating agents in everyday consumer products: Some (TS). **J. Roger Hart.** 75
Forensic chemistry (8th Bien. Conf. Report). 19
Forensic chemistry—A symposium collection
Forensic chemistry: An introduction to the profession. 1043
Literature of forensic science. **Keith O. Barry.** 1044
In-service training programs in the forensic sciences. **K. Dale Livingston.** 1046
Chemistry and crime: A laboratory-based forensic science techniques course as an alternative to a natural science requirement. **E. J. Nienhouse.** 1047
Toxicology laboratory: An application of forensic chemistry. **Vidmantas Raisys.** 1050
Research directions in forensic science. **G. F. Sensabaugh.** 1051
Undergraduate education in forensic science and chemistry. **Peter J. Desio and R. E. Gaensslen, and Henry C. Lee.** 1053
Chemistry and the FBI. **Thomas O. Munson and Linda C. Davidson.** 1054
Cooperative education program in forensic chemistry. **Geoffrey Davies and Kathleen M. Higgins.** 1057
Forensic experiments, Focus on (F&R). **Keith O. Berry.** 1060
Forensic science: A way to introduce scientific techniques to nonscience majors. **W. Glenn Esslinger.** 777
Forks, and beer cans as potentiometric sensors, Knives (GB). **Walter S. Selig.** 431
Formulas, Problem on (EQE). **Elaine J. Browne.** 242
Forster theory, Energy transfer between dyes: A study using fluorescence quenching and. **David M. Goodall and David R. Roberts.** 711
Fourier transform NMR, Primer on. **Roger S. Macomber.** 213
Free radical reactions, Chain reaction wheel: An approach to. **Manus Monroe and Karl Abrams.** 467
Friendly plastic. **William L. Bell.** 240
Frontier orbital analysis of the bathochromic shift of monosubstituted benzenes. **Anthony J. Duben.** 373
Fruit juice by standard addition, Flame spectrometric determination of calcium in. **Arthur N. Strohl.** 343
Fuels, Course on synthetic. **Howard S. Kimmel and Reginald P. T. Tomkins.** 249
Fume hoods, Updating older (SAFETY). **G. Thomas Saunders.** A178

G

Game programs for benzene synthesis, Graphics drill and (CS). **Patrick J. Flash.** 1028
Gamma rays scattering by outer shell electrons, Microcomputer use in practical and simulated experiments of (CS). **D. Cabrol, G. Mallet, and T. Chauvet.** 1026
Garvan women, The. **Molly Gleiser.** 1065
Gas, Calculation of the reversibility factor for an irreversible adiabatic process of an ideal. **On-Kok Chang.** 108
Gas chromatographic determination of fatty acid compositions. **Horacio Heinzen, Patrick Moyna, and Antonia Grompone.** 449
Gas chromatography experiment for proving the application of quantum symmetry restrictions in homonuclear diatomic molecules. **M. Dosiere.** 891
Gas density demonstration, Invisible water (TD). **Richard P. Maciel.** 153
Gas discharge/cathode ray tube, Simple, inexpensive gas discharge. **Roger L. Weichman.** 340
Gas imperfection, Experiment to measure. **W. P. Baskett and G. P. Matthews.** 353
Gas in breakthrough phenomena, Use of laboratory-supplied natural. **G. A. Eiceman, B. Davani, and J. Gardea-Torresdey.** 614
Gas kinetic explanation of simple thermodynamic processes. **Boyd A. Waite.** 224
Gas law, Derivation of the ideal (TF). **S. Levine.** 399
Gas laws, Why do we teach (GOALS)? **Robert Roe, Jr.** 505
Gas laws, Why teach the (GOALS)? **Derek A. Davenport.** 505
Gas phase kinetic experiment for the undergraduate laboratory, Pyrolysis of cyclopropane. **B. V. O'Grady.** 709
Gases, Value of the critical compressibility factor for the Redlich-Kwong equation of state of. **Reino W. Hakala.** 110
Gasoline by atomic absorption spectrometry, Determination of lead in. **M. F. M. Coleman.** 261
Gel filtration—An innovative separation technique (F&R). **Fred Blumenfield and James Gardner.** 715
Gelatin as a physically crosslinked elastomer. **G. V. S. Henderson, Jr., D. O. Campbell, V. Kuzmicz, and L. H. Sperling.** 269
Gels, Crystal growth in. **Steven L. Suib.** 81
Geminal alkyl groups, Van der Waals compression of hydrogen atoms by. **Mohammad Ismail Qureshi.** 861
General chemistry course: The prelecture assignment, Developing study skills in the context of the. **Frank J. Kristine.** 509
General chemistry
Addendum to experiment to determine formula of MgO. 626
Aqueous hydrogen peroxide: Its household uses and concentration units (AA). 152
Auto analogies (AA). 579
Buffer demonstration (TD). 608
Cathodic protection by impressed current (TD). 531
Chemical additives in common table salt (TS). 1016
Comment on "The order of CH_3CHO decomposition" (TF). 399
Comparative approach to teaching prediction of molecular geometry. 220
Competition analogy (AA). 869
Definition and symbols for the quantity called "molarity" or "concentration" and for the SI units of this quantity. 741
Demonstration of buffer capacity of various acetic acid sodium acetate systems. 337
Demonstration of concentration change with time (TD). 153
Derivation of the ideal gas law (TF). 399
Determination of molecular dimensions using monolayers. 795
Different look at the solubility-product principle. 645
Doing the dishes: An analogy for use in teaching reaction kinetics. 1015
EDTA-type chelating agents in everyday consumer products (TS). 75
Electrochemical errors (AA). 424
Energy interconversions in photosynthesis (CHEM I). 659
Estimating the one-electron reduction potential for vanadium (V) by chemical techniques. 440
Five Avogadro's number problems (TS). 76
Fractional bond order (EQE). 605
Freshman chemistry and materials at NJIT. 133
Freshman chemistry as a predictor of future academic success. 313
Gas kinetic explanation of simple thermodynamic processes. 224
Goals in teaching electrochemistry. 1018
Gram formula weights and fruit salad (AA). 61
Group discussions in the chemistry classroom and the problem-solving skills of students. 842
How should equation balancing be taught? 507
Invisible water: A gas density demonstration (TD). 153
Le Chatelier's principle (EQE). 863
Le Chatelier—Right or wrong? 305
Limiting and excess reagents, theoretical yield (AA). 61
Limiting reagent problems made simple for students. 106
Microcomputer use in practical and simulated experiments of gamma ray scattering by outer shell electrons (CS). 1026
Mnemonic for predicting electronegativity values. 230
Model to illustrate the brittleness of ionic and metallic crystals. 667
Molecular size and Raoult's law. 1090
New stoichiometry for copper dissolution in nitric acid. 761
Origins of bonding concepts (LTE). 362
Pictorial framework to aid conceptualization of reaction stoichimetry. 510
Predictions of crystal structure based on radius ratio. 215
Predictors of grades for allied health students. 127
Problem-solving skills in chemistry made easier (INS). 396
Propagation of significant figures. 693
Puzzles for teaching descriptive chemistry.

1103
Question on buffers. 606
Quick conductivity cell. 799
Relative strength of oxyacids and its application. 41
Relativistic effects at the freshman level. 197
Rules for balancing reactions. 55
Separation and identification of commonly used drugs by TLC. 160
Simple demonstration of buffer action. 435
Some practical approaches in introductory chemistry. 317
Student misconceptions in thermodynamics. 847
Symposium on chemistry for citizens. 762
Symposium on the first day of class. 601
Teaching quantity equations. 839
Technology of the rare earths. 665
Testing Boyle's Law data with a computer (CS). 497
Thermochemistry experiment for freshman chemistry lab. 172
Transuranium elements (CHEM I). 463
Two visually stimulating general chemistry demonstrations (TD). 1108
Use of the summary card in chemistry examinations. 779
Using a conversion matrix to simplify stoichiometric calculations from balanced equations (INS). 396
Using rubber stamps as a teaching tool. 318
Visualization of buffer action and the acidifying effect of CO_2 (TD). 436
Water softener—A relevant, unifying example of many common chemical principles and calculations (INS). 529
Why does concentrated HCl fume? 395
Why isn't my rain as acidic as yours? 158
Working backwards is a forward step in the solution of problems by dimensional analysis. 414
Geochemistry for chemists. **John D. Hostettler.** 823
Geochronology, Radioactive dating: A method for (CP). **M. W. Rowe.** 580
Geometry of triatomic systems, Simple method to determine the. **R. A. Thuraisingham** and **V. C. Epa.** 486
Gerhardt, Charles, and the theory of organic combination (PROFILES). **Jimmy Dickerson.** 323
Gibbs' paradox for entropy of mixing. **H. R. Kemp.** 47
Gifted children in the intermediate grades, Chemistry for (CK). **Dorothy Gabel.** 702
Glass, Photochromic (IND). **R. J. Araujo.** 472
Glasses, Phototropic. **Markus Eiswirth** and **Robert J. Schwankner.** 641
Goals, edited by **David A. Phillips** and **Prudence Phillips**
Constant properties of systems: A rationale for the inclusion of thermodynamics in a high school chemistry course. **Ethel L. Schultz.** 228
Electrochemistry. **Ronald I. Perkins.** 1018
Goals in teaching electrochemistry. **J. T. Maloy.** 1018
Should thermodynamics be x-rated? **Henry A. Bent.** 228
Why do we teach gas laws? **Robert Roe, Jr.** 505
Why teach the gas laws? **Derek A. Davenport.** 505
Going beyond, going further, edited by **N. H. Ettinger**
Chemical properties of commonly available hydrocarbons. **Ivo Perina.** 864
Knives, forks, and beer cans as potentiometric sensors. **Walter S. Selig.** 431
Grades in general chemistry for allied health students, Predictors of. **C. L. Craney** and **R. W. Armstrong.** 127
Grading scheme, Noncoercive, menu-driven. **Kenneth S. Suslick.** 408
Gram formula weights and fruit salad (AA). **Wayne L. Felty.** 61
Graphical representation on logarithmic triangular coordinates. **Zvi Rjgbi.** 855
Graphics drill and game programs for benzene synthesisn (CS). **Patrick J. Flash.** 1028
Group discussions in the chemistry classroom and the problem-solving skills of students. **James L. Fasching** and **Bette LaSere Erickson.** 842

H

Halocyclopropanes, Electrocyclic ring opening of. **J. Hodge Markgraf, Manuel Finkelstein, Kathryn J. Leonard,** and **Shari I. Lusskin.** 265
Hammett, Louis P., Symposium on the history of physical organic chemistry, Introduction to the (CHS). **Leon Gortler.** 752
Hard-sphere model, Periodic and aperiodic close packing: A spontaneous. **B. W. van de Waal.** 293
Harkins, William Draper, (1873–1951): A controversial and neglected American physical chemist. **George B. Kauffman.** 758
Hazards—Educating the artist, Art. **Allen A. Denio.** 772
HCl fume, Why does concentrated? **On-Kok Chang.** 395
Health and safety, Symposia on (8th Bien. Conf. Report). 9
Health hazards, Symposium on chemical toxicology and (8th Bien. Conf. Report). 12
Health-science students, Organic chemistry for. **Julien Genyea** and **Denis Callewaert.** 272
Health-science students, Organic chemistry for. **Margot K. Schumm.** 272
Health students, Predictors of grades in general chemistry for allied. **C. L. Craney** and **R. W. Armstrong.** 127
Heat, work, and metabolism. **J. N. Spencer.** 571
Helium atom, Integral transform approach electron-repulsion integral and the. **Fernando R. Ornellas.** 378
Heme proteins, Synthetic analogs of O_2-binding. **Kenneth S. Suslick** and **Thomas J. Reinert.** 974
Hemoglobin, More refined experiments with. **Philippe Morin.** 1122
Herbicides for aquatic weeds, Challenge of (IND). **Dean F. Martin** and **Barbara B. Martin.** 1006
Heterocycles and reactive intermediates in the undergraduate organic lab. **K. Dean Bowles, David Quincy, Brenda Mallet, John I. McKenna,** and **N. R. Natale.** 1118
Hexaammine complexes of Cr(III) and Co(III): A spectral study. **D. R. Brown** and **R. R. Pavlis.** 807
High performance liquid chromatography: An undergraduate analytical chemistry experiment, Determination of aspartame, caffeine, saccharin, and benzoic acid in beverages by. **Michael F. Delaney, Kathleen M. Pasko, David M. Mauro, Diane S. Gsell, Philip C. Korologos, John Morawski, Linda J. Krolikowski,** and **F. Vincent Warren, Jr.** 618
High performance liquid chromatography, Determination of caffeine in beverages by. **James E. DiNunzio.** 446
High performance liquid chromatography: Separation of chlorophyll a and chlorophyll b from their diastereomers, Normal-phase open column versus reversed-phase. **Peter M. Schaber.** 1110
High school chemistry
Also see listings under the following features: *Applications and Analogies, Chemical Principles Revisited, Chem I Supplement, Chemistry for Kids, Filtrates and Residues, Going Beyond, Going Further, Goals, Inventory Control, Insights, Opportunities in Continuing Education, Profiles in Chemistry, Safety Tips, Thumbnail Sketches,* and *View from my Classroom.*
Chemistry course for high ability 8th, 9th, and 10th graders. 423
Chemistry of polymers, proteins, and nucleic acids. 1075
Chemistry teacher enrichment programs. 698
College chemistry students' recommendations to high school students. 700
Encouraging young women to pursue science and engineering careers through chemistry. 837
Group discussions in the chemistry classroom and the problem-solving skills of students. 842
Invisible water: A gas density demonstration (TD). 153
Lead in hair and in red wine by potentiometric stripping analysis. 532
New approach to learning from observing reactions. 238, 648
New approach to training secondary school teachers. 426
Precepts for use of computers in teaching. 236
Problem on formulas (EQE). 2½
Report of the Seventh International Conference on Chemical Education. 417
Symposium on chemistry for citizens. 762
Teaching quantity equations. 839
Using a dissecting microscope in teaching introductory chemistry. 157
Why do students choose chemistry as a major? 501
History
Baccalaureate origins of doctorate recipients in chemistry: 1920–80. 406
Beguin, John, and his "Chymical Beginner" 751
Boscovich, Roger, and the development of chemical theory. 848
Chemists as autobiographers: the 19th century. 275
Clarke, F. W., and nineteenth century undergraduate research at the University of Cincinnati. 233
Cottrell, Frederick Gardner, and the Research Corporation (PROFILE). 135
Cupellation: The oldest quantitative chemical process. 668
Davy, Humphrey: At the vanguard of a new chemistry (PROFILES). 397
Education and early researches of Henry Eyring (CHS). 93
Education for the serendipitous discovery. 282
Einstein and Michaelson: An anecdote. 914
Elemental etymology: What's in a name? 787
Ewens-Bassett notation for inorganic compounds. 474
Fieser, Mary: A transitional figure in the history of women. 186
Garvan women. 1065
Gerhardt, Charles, and the theory of organic combination. 323
Harkins, William Draper, (1873–1951): A controversial and neglected American physical chemist. 758
Interview with Jannik Bjerrum and Christian Klixbull Jorgensen. 1002
Introduction to the Louis P. Hammett symposium on the history of physical organic chemistry (CHS). 752
Lewis, Gilbert Newton, and the amazing electron dots. 569
My journey from organic to bioorganic chemistry (CHS). 592
Nuclear synthesis and identification of new elements (CHEM I). 392
Origin and adoption of the stock system. 243
Origin of the name of the element indium. 674
Physical organic community in the United States, 1925–50. 753
Proton history. 859
Rutherford's code of arms. 623
Transuranium elements (CHEM I). 463
What can a nineteenth century chemistry textbook teach twentieth century chemists? 749
What's in a name: $NaNO_3$. 56
Homonuclear diatomic molecules, Gas chromatography experiment for proving the application of quantum symmetry restrictions in. **M. Dosiere.** 891
How to turn on an electric light. **F. H. Westheimer.** 769
Huckel and valence bond theories, Electronic structure of pi systems: Part II. The unification of. **Marye Anne Fox** and

F. A. Matsen. 477
Huckel theory with electron repulsion, Electronic structure in pi systems: Part I. Marye Anne Fox and F. A. Matsen. 367
Hydrocarbons, Chemical properties of commonly available (GB). Ivo Perina. 864
Hydrogen atom model, Elementary pulsating-sphere (PO). Robert L. Wadlinger, James H. Lawler, and Charles R. Brent. 294
Hydrogen atoms by geminal alkyl groups, Van der Waals compression of. Mohammad Ismail Qureshi. 861
Hydrogen-bonded ionic species of salts of easily accessible acids and bases: An undergraduate laboratory experiment. B. Chawla and Sarita Chaudhry. 347
Hydrogen peroxide: Its household uses and concentration units, Aqueous (AA). Michael J. Webb. 152
Hydroxides, Periodicity in the acid-base behavior of oxides and. Ronald L. Rich. 44
Hypervalent molecules and peripheral orbitals. San-Yan Chu and Shyi-Long Lee. 857

I

Ideal gas, Calculation of the reversibility factor for an irreversible adiabatic process of an. On-Kok Chang. 108
Ideal gas of rigid rotors, Thermodynamic internal energy of an. Ira N. Levine. 53
Identification of thermoplastic polymers, Rapid. Helene Cloutier and Robert E. Prud'homme. 815
Imperfection, Experiment to measure gas. W. P. Baskett and G. P. Matthews. 353
Indicators, Edible acid-base. Robert C. Mebane and Thomas R. Rybolt. 285
Indicators for solvent parameters, Metal complexes as color. Rudolf W. Soukup and Roland Schmid. 459
Indium, Origin of the name of the element. Ivan Gutman. 674
Industrial case studies, Students' preferences for. Hemi Nae and Avi Hofstein. 198
Industrial chemistry: A series of new courses at the undergraduate level. Jerry P. Jasinski and Robert E. Miller. 742
Industrial chemistry at Michigan Tech. D. K. Bates and A. B. Ponter. 745
Industrial chemistry course to bridge the academia-industry gap. H. Harry Szmant. 736
Industry, BS chemist in. Philip H. Merrell. 734
Industry, Evolution of the profession of research chemists in. Ellington M. Beavers and Barbara F. Nodine. 728
Information management systems in the undergraduate instrumental analysis laboratory (TICI). Robert J. Merrer.
Part I. Introduction to LIMS. A149
Part II. Applications of LIMS. A173
Information retrieval, Introducing chemistry undergraduate students to online chemical. Yecheskel Wolman. 315
Information science in the clinical chemistry curriculum, Laboratory (CS). Donald A. Boudreau and Paul G. Catrou. 496
Information transfer and differing sensory modalities in the large lecture format: Some practical approaches in introductory chemistry. Michael J. Strauss and Shellie H. Levine. 317
Infrared conformational analysis of alpha, beta-unsaturated ketones, Computer-assisted quantitative. P. Tisnes and M. Perry. 903
Infrared spectrophotometer to a microcomputer, Interfacing a scanning (CS). B. M. Mattson, T. R. Shepherd, and J. F. Solsky. 690
Infrared spectroscopy experiment, Quantitative. Mark D. Krahling and Robert Eliason. 886
Infrared spectroscopy of deuterated compounds: An undergraduate experiment. Patrick MacCarthy. 633
Ink: A demonstration of the chromatographic mechanism, Countercurrent extraction of, Clark E. Bricker and Gregory T. Sloop. 1109
Inks, Science fair display of chromatography of (CS). G. L. Breneman and O. J. Parker. 410
Inorganic chemistry as found in the contents of seven post-1980 textbooks. Paul S. Poskozim. 747
Inorganic chemistry
Bioinorganic activity of technetium radiopharmaceuticals. 965
Bioinorganic chemical modeling of dioxygen-activating copper proteins. 983
Bioinorganic chemistry—State of the art. 916
Colorful complexes of copper(II). 798
Coordination chemistry of alkali and alkaline-earth cations with macrocyclic ligands. 954
Copper-zinc superoxide dismutase. 990
Crystal growth in gels. 81
Cupellation: The oldest quantitative chemical process. 668
Determination of ethane-1, 2-diamine in inert complexes. 892
Determination of lead in gasoline by atomic absorption spectrometry. 261
Determination of the metal-metal distance in the mixed valence complex $K_2Pt(CN)_4Br_{0.3}\cdot 3H_2O$. 254
Different look at the solubility-product principle. 645
Ewens-Bassett notation for inorganic compounds (TS). 474
Experiment on oxidation kinetics of copper in solid state. 341
Experimental approaches to studying biological electron transfer. 932
Facile synthesis of a macrobicyclic hexaamine cobalt(III) complex based on tris(ethylenediamine)cobalt(III). 804
Fractional bond order (EQE). 605
General approach to radius ratios of simple ionic crystals. 384
Geochemistry for chemists. 823
Group electronegativity method with Pauling units. 101
Hypervalent molecules and peripheral orbitals. 857
Interstitial solid solutions: Cooperation of energy and geometry. 675
Interview with Jannik Bjerrum and Christian Klixbull Jorgensen. 1002
Ionic model for metallic bonding. 383
Iron-sulfur-carbonyl and -nitrosyl complexes. 534
Key elements of the chemistry of cytochrome P-450. 928
Laboratory exercise on inorganic biomimetic compounds. 168
Magnetic and spectral properties of an air-stable d^3 titanium complex. 442
Mer- and fac-$[Co(NH_3)_3(NO_2)_3]$: Do they exist? 707
Metal complexes as color indicators for solvent parameters. 459
Methemoglobinemia: An illness caused by the ferric state. 181
Molarity (atomic density) of the elements as pure crystals. 1086
Molybdenum enzymes, cofactors, and model systems: The chemical uniqueness of molybdenum. 943
New perspectives on the essential trace elements. 917
Origin and adoption of the stock system. 243
Pauling 3-electron bond. 99
Perchlorate salts of metal ion complexes. 1001
Periodicity in the acid-base behavior of oxides and hydroxides. 44
Photochromic glass (IND). 472
Phototropic glasses. 641
Predictions of crystal structure based on radius ratio. 215
Production of oxygen gas through catalysts. 809
Progress in understanding a novel copper center in proteins. 997
Relative strength of oxyacids and its application. 41
Simple homogeneous precipitation preparation of chromium(II) acetate. 444
Simple method to determine the geometry of triatomic systems. 486
Solubility of mercury (LTE). 720
Some improper terms in coordination chemistry. 143
Spectral study of hexaammine complexes of Cr(III) and Co(III). 807
Spectroscopic studies of the catechol dioxygenases. 938
Synthesis of organometallic palladium complexes. 896
Synthetic analogs of O_2-binding heme proteins. 974
Systematic presentation of organic phosphorus and sulfur compounds. 245
Technology of the rare earths. 665
Tris(oxalato) teaching aids. 445
Zinc enzymes. 924
Teaching trends (8th Bien. Conf. Report). 16
Input and output capabilities of the TRS-80 color computer, Upgrading the (CS). Elvin Hughes, Jr. and A. J. Cox, Jr. 63
Insect chemists, Polyester-making bees and other innovative (CHEM I). Suzanne W. T. Batra. 121
Insights, edited by Donna Bogner

Laboratory: An application of forensic chemistry, Toxicology. **Vidmantas Raisys.** 1050
Laboratory-based forensic science techniques course as an alternative to a natural science requirement, Chemistry and crime. **E. J. Nienhouse.** 1047
Laboratory chemistry for elementary school teachers (CK). **Linda M. Woodward.** 527
Laboratory coursework, Poster presentations for evaluating. **John H. Kennedy.** 1104
Laboratory equipment: An international initiative, Development of low-cost, locally produced. **Pramod K. Srivastava, Kamalni Sane, Krishna V. Sane,** and **David J. Waddington.** 428
Laboratory experiments in the 1980's: A case study on the oxidation of alcohols with household bleach, Design of. **Jerry R. Mohrig, David M. Nienhuis, Catherine F. Linck, Carol Van Zoeren, Brian G. Fox,** and **Peter G. Mahaffy.** 519
Laboratory experiments
Acetylation of an unknown alcohol studied by ^{1}H-NMR. 899
Acid rain analysis by standard addition titration. 257
Activation energies for an enzyme-catalyzed and acid-catalyzed hydrolysis. 86
Addendum to experiment to determine formula of MgO. 626
Aldol condensation-photochemical-bromination sequence with emphasis on spectroscopic interpretations. 908
Biochemistry off the shelf. 796
Breakthrough phenomena illustrated with natural gas. 614
Carbonic anhydrase catalysis. 1124
Chemical properties of commonly available hydrocarbons. 864
Colloid titration experiment. 627
Colorblindness and titrations with visual indicators. 255
Computer-assisted quantitative infrared conformational analysis of alpha, beta-unsaturated ketones. 903
Computer program to assist in laboratory assessment (CS). 310
Concerning the syntheses and structure of 2,3-dihydro-1, 4-diphenyl-2, 3-triphenylenedicarboxylic anhydride. 79
Consecutive reaction for the physical chemistry laboratory. 175
Coulometric titrations using computer-interfaced potentiometric endpoint detection (CS). 688
Countercurrent extraction of ink. 1109
Crystal growth in gels. 81
Database training in forensic science. 500
Demonstration of erythrocyte membrane asymmetry. 621
Design of a computer-controlled flow-injection analyzer (CS). 65
Designing an experiment on natural indicators. 522
Detection of chromium in presence of iron and manganese. 349
Determination of aspartame, caffeine, saccharin, and benzoic acid in beverages by high performance liquid chromatography. 618
Determination of ethane-1, 2-diamine in inert complexes. 892
Determination of lead in gasoline by atomic absorption spectrometry. 261
Determination of molecular dimensions using monolayers. 795
Determination of spectroscopic resonance integral of a series of conjugated dyes. 351
Determination of the metal-metal distance in the mixed valence complex $K_2Pt(CN)_4Br_{0.3}\cdot 3H_2O$. 254
Determination of the pH of standard buffer solutions. 350
Deuterium exchange kinetics by NMR. 889
Easy DCl(g) prep for the HCl(g)-DCl(g) IR experiment. 524
Effect of cationic micelles on the hydrolysis of 4-nitrophenyl acetate. 1120
Electrocyclic ring opening of halocyclopropanes. 265
Energy content of pizza. 438
Esterification of trifluoracetic acid. 911
Estimating the one-electron reduction potential for vanadium (V) by chemical techniques. 440
Experiment to examine the phosphate interference in the flame emission analysis of calcium. 161

Experiment to quantitate organically bound phosphate. 898
Experiments in software data handling (CS). 866
Facile synthesis of a macrobicyclic hexaamine cobalt(III) complex based on tris(ethylenediamine)cobalt(III). 804
Flame spectrometric determination of calcium in fruit juice by standard addition. 343
Fluorescence quenching of acridinium ions in sodium dodecyl sulfate micelles. 165
Focus on forensic experiments (F&R). 1060
FORTH-language, computer-controlled potentiometric titration (CS). 667
Gas chromatographic determination of fatty acid compositions. 449
Gas chromatography experiment to prove quantum symmetry restrictions apply to diatomic molecules. 891
Gel filtration (F&R). 715
Gelatin as a physically crosslined elastomer. 269
Heterocycles and reactive intermediates in the undergraduate organic lab. 1118
HPLC determination of caffeine in beverages. 446
HPLC study of colas. 447
Hydrogen-bonded ionic species of salts of easily accessible acids and bases. 347
Identification of the stable conformer of cyclohexane by vibrational spectroscopy. 887
Improved method for visualizing TLC plates using iodine. 156
Improvement in the classical copper cycle experiment. 177
Individualized Nernst equation experiment. 875
Inexpensive Apple II/photometer interfacing. 692
Infrared spectroscopy of deuterated compounds. 633
Inorganic biomimetic compounds. 168
Instrumentation and the total analytical process (TICI). A85
Intefacing a scanning infrared spectrophotometer to a microcomputer. 690
Introducing statistics to analytical and clinical students. 536
Ion exchange chromatography and spectrophotometry. 170
Iron-sulfur-carbonyl and -nitrosyl complexes. 534
Isotopic dilution analysis and secular equilibrium study. 894
Kinetic analysis of metal ions. 258
Kinetic study of absorption processes in solution. 800
Knives, forks, and beer cans as potentiometric sensors (GB). 431
Lead in hair and in red wine by potentiometric stripping analysis. 532
Magnetic and spectral properties of an air-stable d^1 titanium complex. 442
Measurement of gas imperfection. 353
Measuring the atomic or molecular mass of a gas with a tire gauge and a butane lighter fluid can. 434
Mer- and fac-$[Co(NH_3)_3(NO_2)_3]$: Do they exist? 707
Method to perform liquid diffusion crystallization. 84
Microcomputer use in practical and simulated experiments of gamma rays scattering by outer shell electrons (CS). 1026
Microscale experiments. 149, 147, 1114
Microscale group test for carbonyl compounds. 806
Molecular fluorescence for studying phase changes in solid state decomposition. 164
Molecular weight measurement for water-soluble polymers using microemulsions. 545
Monomer reactivity ratios. 173
More refined experiments with hemoglobin. 1122
Multistep synthesis for the introductory organic course. 1116
New stoichiometry for copper dissolution in nitric acid. 761
Nitric acid oxidation of selected alcohols and ketones. 637
Normal-phase open column versus reversed-phase high performance liquid chromatography. 1110
Nuclear chemistry experiment to determine potassium in apricots. 439
Oxidation kinetics of copper in solid state. 341
Phase-transfer-catalyzed alkylation of ethyl acetoacetate and diethyl malonate. 907
Phosphorus and sulfur ylide formation by phase transfer catalysis. 267
Photophysical properties of 2-naphthol. 630
Polymerization evaluation by spectrophotometric measurements. 450
Preparation and characterization of myosin proteins. 900
Preparation and properties of cholesteric liquid crystals. 454
Preparation of artists' pigments. 334
Preparation of benzoyl esters of phenols and benzoic anhydride by phase-transfer catalysis. 518
Preparation of the bromohydrin of 3-sulfolene. 638
Production of oxygen gas through catalysts. 809
Promotion of organic reactions by ultrasound. 85
Protactinium—^{234m}Pa generator experiment. 623
Pyrolysis of cyclopropane. 709
Qualitative analysis of some transition metals (F&R). 80
Quantitative infrared spectroscopy experiment. 886
Quick method for determining the density of single crystals. 167
Rapid identification of thermoplastic polymers. 815
Semipermeability of biological membranes. 89
Separation and identification of commonly used drugs by TLC. 160
Signal-to-noise improvement. 542
Simple homogeneous precipitation preparation of chromium(II) acetate. 444
Simplified method to prepare 2-amino-5-bromopyrimidine. 905
Solubility of $CaSO_4$ (LTE). 362
Spectral study of hexaammine complexes of Cr(III) and Co(III). 807
Spectrophotometric study of oxidation of secondary alcohols with Cr(VI). 344
Spectrophotometric study of the photochromism of mercury dithizonate. 802
Structural isomer identification via NMR. 260
Study using fluorescence quenching and Forster theory. 711
Synthesis and multinuclear lanthanide shift reagent NMR analysis of 1- and 2-adamantanol. 537
Synthesis and simple molecular weight determination of polystyrene. 705
Synthesis of organometallic palladium complexes. 896
Synthesis of 1-phenyl-1, 2, 3, 4-tetrahydroisoquinolines. 262
Synthesis of 3,4-dihydro-3-[*p*-methylphenyl]-1,3,2H-benzoxazine. 913
Testing Boyle's Law data with a computer (CS). 497
Thermochemistry experiment for freshman chemistry lab. 172
Titrimetric determination of acetylsalicylic analgesic tablets. 811
TLC of organic dyes in undergraduate labs. 361
Tris(oxalato) teaching aids. 445
Undergraduate organic experiment using thin-layer chromatography. 813
Use of brown algae to demonstrate natural products techniques. 635
Using a dissecting microscope in teaching introductory chemistry. 157
Verification of the Nernst equation and determination of a standard electrode potential. 882
Water electrolysis—A surprising experiment. 154
Wittig reaction in the undergraduate organic laboratory. 346
Laboratory: I: An approach to improving air quality in instructional laboratories, Microscale organic. **Samuel S. Butcher, Dana W. Mayo, Ronald M. Pike, Caroline M. Foote, Janet R. Hotham,** and **David S. Page.** 147

Insect reactions (CHEM I). 121
Low-pressure extraction. 533
Method for assigning *R/S* configurations. 223
Microcomputer-assisted drills in organic synthesis (CS). 411
Microscale group test for carbonyl compounds. 806
Microscale organic laboratory. Part I. 147. Part II. 149. Part III. 1114
MOLPIX—A program for generating and displaying molecular structures (CS). 413
Multistep synthesis for the introductory organic course. 1116
My journey from organic to bioorganic chemistry (CHS). 592
Nitric acid oxidation of selected alcohols and ketones. 637
Phase transfer catalysis and carbonion formation (TD). 608
Phase-transfer-catalyzed alkylation of ethyl acetoacetate and diethyl malonate. 907
Phosphorus and sulfur ylide formation by phase transfer catalysis. 267
Physical organic community in the United States, 1925–50. 753
Preparation and properties of cholesteric liquid crystals. 454
Preparation of benzoyl esters of phenols and benzoic anhydride by phase-transfer catalysis. 518
Preparation of the bromohydrin of 3-sulfolene. 638
Problem on formulas (EQE). 242
Producing accurate stereographic images with a flashlight and layers of glass. 525
Promotion of organic reactions by ultrasound. 85
Proposed new convention for graphic presentation of molecular geometry and topography. 114
Protein structure model. 1077
Proton NMR spectra. 871
Reverse-phase separation of FD & C dyes using a solvent gradient. 798
Simple explanation for the predominance of allylic substitution over olefin addition by bromine at low concentrations. 650
Simplified method to prepare 2-amino-5-bromopyrimidine. 905
Solvation energies of organic ions. 385
Stereoscopic projection in organic chemistry. 1084
Structural isomer identification via NMR. 260
Synthesis and multinuclear lanthanide shift reagent NMR analysis of 1- and 2-adamantanol. 537
Synthesis and simple molecular weight determination of polystyrene. 705
Synthesis of 1-phenyl-1,2,3,4-tetrahydroisoquinolines. 262
Synthesis of 3,4-dihydro-3-[p-methylphenyl]-1,3,2H benzoxazine. 913
Systematic presentation of organic phosphorus and sulfur compounds. 245
Teaching the research process via organic chemistry lab projects. 516
Teaching trends (8th Bien. Conf. Report). 16
TLC of organic dyes in undergraduate labs. 361
Two-cycle undergraduate course. 77
Ultrasound in the undergraduate lab (LTE). 720
Undergraduate organic experiment using thin-layer chromatography. 813
Van der Waals compression of hydrogen atoms by geminal alkyl groups. 861
Wittig reaction in the undergraduate organic laboratory. 346
Organically bound phosphate: With special emphasis on biochemical molecules, Experiment to quantitate. **Richard E. Palmer.** 898
Organometallic palladium complexes: An undergraduate experiment, Synthesis of. **Christopher T. Bailey and George C. Lisensky.** 896
Origin of the name of the element indium. **Ivan Gutman.** 674
Overhead projection, Producing accurate stereographic images with a flashlight and layers of glass: A source for stereopsis via slides or. **Michael J. Strauss and Shellie H. Levine.** 525
Oxidation kinetics of copper: An experiment in solid state chemistry. **Y. Ebisuzaki and W. B. Sanborn.** 341
Oxidation of alcohols with household bleach, Design of laboratory experiments in the 1980's: A case study on the. **Jerry R. Mohrig, David M. Nienhuis, Catherine F. Linck, Carol Van Zoeren,**

Brian G. Fox, and Peter G. Mahaffy. 519
Oxidation of secondary alcohols with Cr(VI): A spectrophotometric method. Timothy J. Mason, J. A. Turrell, and C. W. Went. 344
Oxidative degradation, Drug stabilization against (CHEM I). Michael J. Akers. 325
Oxides and hydroxides, Periodicity in the acid-base behavior of. Ronald L. Rich. 44
Oxyacids and its application, The relative strength of. Manus Monroe and Karl Abrams. 41
Oxygen gas: A student catalysis experiment, Production of. A. I. Onuchukwu and P. B. Mahelia. 809
Oxygen in research experiments, Handling of (SAFETY). R. J. Burnett and J. E. Cole, Jr. A157
Oxygen rebound mechanism, Key elements of the chemistry of cytochrome P-450. John T. Groves. 928

P

Palladium complexes: An undergraduate experiment, Synthesis of organometallic. Christopher T. Bailey and George C. Lisensky. 896
Pauling units, A group electronegativity method with. Steven G. Bratsch. 101
Pauling 3-electron bond: A recommendation for the use of the Linnett structure. Richard D. Harcourt. 99
Pearl essence: A speciality chemical product (IND). Yoshio Morita. 1072
Perchlorate salts of metal ion complexes: Potential explosives. William R. Robinson. 1001
Periodic table, Revised atomic form. Frederick C. Strong III. 456
Periodicity in the acid-base behavior of oxides and hydroxides. Ronald L. Rich. 44
Perspective on kinetic and thermodynamic control of reactions, New. R. B. Snadden. 653
Perturbation example for quantum chemistry, Simple. P. L. Goodfriend. 202
Phase changes in solid state decomposition: 9-cyanoanthracene photodimer, Molecular fluorescence for studying. El-Zeiny M. Ebeid. 164
Phase equilibria involving orientational disordering in crystals, Classroom experiment on. C. C. Mjojo. 83
Phase transfer catalysis and carbanion formation (TD). John W. Hill and Lori J. Enloe. 608
Phase transfer catalysis, Phosphorus and sulfur ylide formation: Preparation of 1-benzoyl-2-phenylcyclopropane and 1,4-diphenyl-1,3-butadiene. Gary M. Lampman, Roger W. Koops, and Caroline C. Olden. 267
Phase-transfer catalysis, Preparation of benzoyl esters of phenols and benzoic anhydride by. A. Yeadon, T. A. Turney, and G. Ramsay. 518
Phase-transfer-catalyzed alkylation of ethyl acetoacetate and diethyl malonate. Douglas L. Thompson and Perry C. Reeves. 907
Philosophy of education
Chemistry texts for nonscience students: Is this chemistry (PO)?. 129
Education for the serendipitous discovery. 282
Evolution of the profession of research chemist in industry. 728
Heretical perspectives in "writing across the curriculum" (PO). 400
Heterogeneous students in homogeneous classrooms (VIEW). 512
How learning theory can help better software (CS). 309
Lab is a puzzle, not an illustration (PO). 874
Let's keep chemistry out of kindergarten. 1071
Molecular structure conundrum. 1082
Naming of evolving theories. 57
Professional education in the sandbox. 1070
Role of theory in chemistry. 165
Should the mole concept be x-rated (INS)? 59
Student use of computers for solving problems. 1094
Symposium on the first day of class. 601
Taking stock of the educational enterprise. 723
Why do students choose chemistry as a major? 501
Phosphate interference in the flame emission analysis of calcium, Experiment to examine the. Donald C. Jackman. 161
Phosphate: With special emphasis on biochemical molecules, Experiment to quantitate organically bound. Richard E. Palmer. 898
Phosphorus and sulfur compounds, Systematic presentation of organic. James B. Hendrickson. 245
Phosphorus and sulfur ylide formation: Preparation of 1-benzoyl-2-phenylcyclopropane and 1,4-diphenyl-1,3-butadiene by phase transfer catalysis. Gary M. Lampman, Roger W. Koops, and Caroline C. Olden. 267
Photochemical-bromination sequence with emphasis on spectroscopic interpretations: An undergraduate organic experiment, Aldol condensation-. Alex T. Rowland, Martin W. Brechbiel, and Anne Sykes Gerelus. 908
Photochromic glass (IND). R. J. Araujo. 472
Photochromism of mercury dithizonate, Windowsill kinetics: A spectrophotometric study of the. Richard L. Petersen and Gaylon L. Harris. 802
Photocopier, Production of scientific visual aids using only a. John H. Bedenbaugh and Angela O. Bedenbaugh. 1092
Photographic applications, EDTA-type chelating agents in everyday consumer products: Some food, cleaning, and (TS). J. Roger Hart. 75
Photometer circuit useful in studying bioluminescence, Inexpensive solid-state. A. V. Stiffey, D. L. Blank, and G. I. Loeb. 360
Photometer interfacing, Inexpensive Apple II. Thomas Russo. 692
Photophysical properties of 2-naphthol: A physical chemistry experiment. Richard Boyer, George Deckey, Charles Marzzacco, Maureen Mulvaney, Catherine Schwab, Arthur M. Halpern. 630
Photosynthesis, Energy interconversions in (CHEM I). Charles L. Bering. 659
Phototropic glasses. Markus Eiswirth and Robert J. Schwankner. 641
Physical chemistry
Activation energies for an enzyme-catalyzed and acid-catalyzed hydrolysis. 86
Better way to prepare DCl. 897
Calculation of the reversibility factor for an irreversible adiabiatic process of an ideal gas. 108
Comments on the closure of the Carnot cycle. 585
Consecutive reaction for the physical chemistry laboratory. 175
Conversion of standard thermodynamic data to the new standard-state. 681
Crystal growth in gels. 81
Derivation of the ideal gas law (TF). 399
Determination of the pH of standard buffer solutions. 350
Deuterium exchange kinetics by NMR. 889
Drug stabilization against oxidative degradation (CHEM I). 325
Entropy criterion for chemical equilibrium. 50
Equivalence of the steady-state and diffusional viewpoints. 104
Equivalent real angular ($l \neq 0$) atomic orbitals. 376
Experiment on oxidation kinetics of copper in solid state. 341
Experiment to measure gas imperfection. 353
Fluorescence quenching of acridinium ions in sodium dodecyl sulfate micelles. 165
Gas chromatography experiment to prove quantum symmetry restrictions apply to diatomic molecules. 891
Gas kinetic explanation of simple thermodynamic processes. 224
Genesis of ladder operators. 205
Gibbs' paradox for entropy of mixing. 47
Graphical representation on logarithmic triangular coordinates. 855
Harkins, William Draper, (1873–1951): A controversial and neglected American physical chemist. 758
Heat, work, and metabolism. 571
Inexpensive, easily constructed vapor pressure apparatus. 345
Interstellar chemistry. 832
Interstitial solid solutions: Cooperation of energy and geometry. 675
Ionic model for metallic bonding. 383
Kinetic study of absorption processes in solution. 800
Le Chatelier—Right or wrong? 305
Le Chatelier's Principle, temperature effects, and entropy. 231
Molecular fluorescence for studying phase changes in solid state decomposition. 164
New perspective on kinetic and thermodynamic control of reactions. 653
Note concerning safety of bomb calorimetry. 902
Notes on the factorization method for quantum chemistry. 567
Orbital shape representations. 206
Perspectives on the uncertainty principle and quantum reality (CP). 192
Phase rule demonstration involving orientational disordering in crystals. 83
Photochromic glass (IND). 472
Photophysical properties of 2-naphthol. 630
Phototropic glasses. 641
Planck radiation functions. 199
Planck's radiation law: Spectral distribution and gamma functions. 488
Polymer principles in the undergraduate physical chemistry course. Part 1. 780. Part 2. 1030
Potential energy surfaces and effects on electronic and Raman spectra. 561
Predictions of crystal structure based on radius ratio. 215
Pyrolysis of cyclopropane. 709
Rapid equilibrium-ordered enzyme mechanisms. 656
Relativistic effects at the freshman level. 197
Representation of ternary liquid composition diagrams. 680
Rival rate equations for steady states. 490
Simple derivation of chemically important classical observables and superselection rules. 379
Simple perturbation example for quantum chemistry. 202
Spectrophotometric study of the photochromism of mercury dithizonate. 802
Standard states of real solutions. 678
Statistical factors in complexation reactions. 107
Student misconceptions in thermodynamics. 847
Study using fluorescence quenching and Forster theory. 711
Teaching trends (8th Bien. Conf. Report). 17
Temperature dependence of errors in parameters derived from Van't Hoff studies. 879
Theory of the liquid-vapor transition of a perfect binary solution. 112
Thermodynamic internal energy of an ideal gas of rigid rotors. 53
Thermodynamically and kinetically controlled products. 575
Tie-line analysis in ternary liquid systems. 382
Trajectory calculations by the rolling ball model. 491
Transition probabilities in a single microsystem. 644
Uncertainty in establishing a reaction intermediate. 789
Value of the critical compressibility factor for the Redlich-Kwong equation. 110
Why does concentrated HCl fume? 395
Physical chemist: The education of early researches of Henry Eyring, Making of a (CHS). Steven H. Heath. 93

Physical organic chemistry, Introduction to the Louis P. Hammett symposium on the history of (CHS). **Leon Gortler.** 752
Physical organic community in the United States, 1925–50: An emerging network. **Leon Gortler.** 753
Pictorial framework to aid conceptualization of reaction stoichiometry. **David L. Cameron.** 510
Pigments, Chemistry and artists'. **Ian S. Butler** and **Richard J. Furbacher.** 334

Steady states, Rival rate equations for. **Sidney I. Miller.** 490
Stereochemical relationships, Determination of. **Folahan O. Ayorinde.** 297
Stereographic images with a flashlight and layers of glass: A source for stereopsis via slides or overhead projection, Producing accurate. **Michael J. Strauss and Shellie H. Levine.** 525
Stereoscopic projection in organic chemistry: Bridging the gap between two and three dimensions. **Arlene A. Rozzelle and Stuart M. Rosenfeld.** 1084
Stereoscopic projection, No-cost three-dimensional pointer for. **J. P. Tollenaere.** 701
Stock system, Origin and adoption of the (TS). **George B. Kauffman and Christian Klixbull Jorgensen.** 243
Stoichiometric calculations from balanced equations, Using a conversion matrix to simplify (INS). **Selman A. Berger.** 396
Stoichiometry for copper dissolution in nitric acid, New. **F. M. El-Cheikh, S. A. Khalil, M. A. El-Manguch, and Hadi A. Omar.** 761
Stoichiometry, Pictorial framework to aid conceptualization of reaction. **David L. Cameron.** 510
Storage dilemma: A workable solution, Chemical (ST). **Brad Yohe and Gary Dunkleberger.** 876
Structure conundrum, Molecular. **R. G. Woolley.** 1082
Structure of 2,3-dihydro-1,4-diphenyl-2,3-triphenylenedicarboxylic anhydride, Concerning the syntheses and. **Alexis V. Baxter, Jon J. Hangeland, and Ernest A. Harrison, Jr.** 79
Student evaluation
CAPE: A computer program to assist with practical assessment (CS). 310
Freshman chemistry as a predictor of future academic success. 313
Microcomputer-based system for filing test questions and assembling tests (CS). 1024
Noncoercive, menu-driven grading scheme. 408
Predictors of grades in general chemistry for allied health students. 127
Use of DIF files for the Apple computer (CS). 499
Student use of computers for solving problems: Tools or crutches? **Richard Cornelius, Daniel Cabrol and Claude Cachet.** 1094
Study skills in the context of the general chemistry course: The prelecture assignment, Developing. **Frank J. Kristine.** 509
Substitution over olefin addition by bromine at low concentrations, NBS reaction: Simple explanation for the predominance of allylic. **Carl C. Warmser and Lawrence T. Scott.** 650
Sulfur-carbonyl and -nitrosyl complexes: A laboratory experiment, Iron-. **Christopher Glidewell, Andrew R. Hyde, James S. McKechnie, and Peter J. Pogorzelec.** 534
Sulfur compounds, Systematic presentation of organic phosphorus and. **James B. Hendrickson.** 245
Sulfur ylide formation: Preparation of 1-benzoyl-2-phenylcyclopropane and 1,4-diphenyl-1,3-butadiene by phase transfer catalysis. **Gary M. Lampman, Roger W. Koops, and Caroline C. Olden.** 267
Summary card in chemistry examinations, Use of the. **P. C. Healy, R. C. Landbeck, and M. G. A'B. Hewson.** 779
Superoxide dismutase: A unique biological "ligand for bioinorganic studies, Copper-zinc. **Joan Selverstone Valentine and Duarte Mota de Freitas.** 990
Superselection rules, Simple derivation of chemically important classical observables and. **U. Muller-Herold.** 379
Symposia
Bioinorganic chemistry—State of the art. 916
Chemistry for citizens. 762
First day of class. 601
Forensic chemistry. 1043
Syntheses and structure of 2,3-dihydro-1,4-diphenyl-2,3-triphenylenedicarboxylic anhydride, Concerning the. **Alexis V. Baxter, Jon J. Hangeland, and Ernest A. Harrison, Jr.** 79
Synthesis and a simple molecular weight determination of polystyrene. **Daniel W. Armstrong, John N. Marx, Don Kyle, and Ala Alak.** 705
Synthesis and multinuclear lanthanide shift reagent NMR analysis of 1- and 2-adamantanol: An advanced undergraduate laboratory project. **Charles D. Schaeffer, Jr. and Claude H. Yoder.** 537
Synthesis of organometallic palladium complexes: An undergraduate experiment. **Christopher T. Bailey and George C. Lisensky.** 896
Synthesis of 1-phenyl-1,2,3,4-tetrahydroisoquionolines: An undergraduate organic laboratory experiment and class project. **R. M. Letcher and M. P. Sammes.** 262
Synthesis of 3,4-dihydro-3-[*p*-methylphenyl]-1,3,2H benzoxazine: An undergraduate organic chemistry experiment. **Magdy N. Iskander and Peter R. Andrews.** 913
Synthetic analogs of O_2-binding heme proteins. **Kenneth S. Suslick and Thomas J. Reinert.** 974
Synthetic fuels, Course on. **Howard S. Kimmel and Reginald P. T. Tomkins.** 249
Systematic presentation of organic phosphorus and sulfur compounds. **James B. Hendrickson.** 245

T

Taking stock of the educational enterprise. **G. A. Crosy.** 723
Teaching aid
Alternative films for making presentation slides for the occasional user. 1097
Easily constructed cuboctahedron model. 1088
Easily constructed model of twin hexahedral cones having a common hexagonal plane. 1068
Friendly plastic. 240
Musical mechanisms. 1093
No-cost three-dimensional pointer for stereoscopic projection. 701
Periodic and aperiodic close packing: A spontaneous hard-sphere model. 293
Producing accurate stereographic images with a flashlight and layers of glass. 525
Production of scientific visual aids using only a photocopier. 1092
Protein structure model. 1077
Stereoscopic projection in organic chemistry. 1084
Use and evaluation of videodiscs in the chemistry laboratory. 420
Use of the "cubic snake" as a molecular model. 1074
Using rubber stamps as a teaching tool. 318
Teaching techniques
Analogy of the NMR effect (AA). 319
Auto analogies (AA). 579
Chain reaction wheel: An approach to free radical reactions. 467
Chemical dominoes. 1102
"Chemistry" problems without chemical terminology (EQE). 402
Comparative approach to teaching prediction of molecular geometry. 220
Demonstrations of signal-to-noise enhancement: Digital filtering. 691
Education of the serendipitous discovery. 282
Fingertip assignment of absolute configuration. 191

Game for reviewing organic chemistry. 476
Gram formula weights and fruit salad (AA). 61
Graphics drill and game programs for benzene synthesis (CS). 1028
Group discussions in the chemistry classroom and the problem-solving skills of students. 842
How should equation balancing be taught? 507
Improving the design of laboratory worksheets. 1037
Introducing chemistry undergraduate students to online chemical information retrieval. 315
Instrumentation and the total analytical process (TICI). A85
Laboratory simulations by computer-driven laser videodiscs. 514
Language gap: Common words with technical meanings. 1098
Learner-generated questions. 606
Learning activity packet on moles (INS). 58
Learning chemical concepts through programming assignments (CS). 498
Limiting and excess reagents, theoretical yield (AA). 61
Limiting reagent problems made simple for students. 106
Method for assigning *R/S* configurations. 223
Microcomputer-based system for filing test questions and assembling tests (CS). 1024
Mnemonic for predicting electronegativity values. 230
Model to illustrate the brittleness of ionic and metallic crystals. 667
Mole: Questioning format can make a difference (INS). 60
New approach to learning from observing reactions. 238, 648
Pandemonium pesticide: A simple demonstration illustrating some fundamental chemical concepts. 870
Pictorial framework to aid conceptualization of reaction stoichiometry. 510
Poster presentations for evaluating laboratory coursework. 1104
Prelecture assignment for general chemistry. 509
Pre-chemistry acid rain activities (CK). 339
Problem-solving skills in chemistry made easier (INS). 396
Puzzles for teaching descriptive chemistry. 1103
Recommendation for the use of the Linnett structure. 99
Relative strength of oxyacids and its application. 41
Rules for balancing reactions. 55
Some practical approaches in introductory chemistry. 317
Students' preferences for industrial case studies. 198
Symposium on chemistry for citizens. 762
Symposium on the first day of class. 601
Teaching quantity equations. 839
Teaching the research process via organic chemistry lab projects. 516
Trajectory calculations by the rolling ball model. 491
Use and evaluation of videodiscs in the chemistry laboratory. 420
Use of the summary card in chemistry examinations. 779
Using a conversion matrix to simplify stoichiometric calculations from balanced equations (INS). 396
Using evening news video tape segments. 227
Water softener—A relevant, unifying example of many common chemical principles and calculations (INS). 529
What can a nineteenth century chemistry textbook teach twentieth century chemists? 749
Working backwards is a forward step in the solution of problems by dimensional analysis. 414
Technetium radiopharmaceuticals, Bioinorganic activity of. **Thomas C. Pinkerton, Carla P. Desilets, Daniel J. Hoch, Martin V. Mikelsons,** and **George M. Wilson.** 965
Technology of the rare earths (IND). **Howard E. Kremers.** 665
Temperature control in nonisothermic chemical kinetics in solution, Simple low-cost device for. **F. Salvador, J. L. Gonzalez,** and **L. M. Tel.** 613
Temperature-controlled chromatography column, Efficient and inexpensive. **Bambi L. Henderson** and **Daniel J. McLoughlin.** 430
Temperature dependence of errors in parameters derived from Van't Hoff studies. **Steven F. Dec** and **Stanley J. Gil.** 879
Temperature effects, and entropy, Le Chatelier's Principle. **J. Arthur Campbell.** 231
Terminology, "Chemistry" problems without chemical (EQE). **Leon S. Ciereszko.** 402
Terminology, Toward a more rational (PO). **R. J. Tykodi.** 241
